EDUCATION

Soochow University **Sep. 2022 – Jun. 2026**
Business Administration *Jiangsu, China*

The University of Chicago, Harris School of Public Policy **Sep. 2026 – Expected Jun. 2028**
Master of Arts in Public Policy with Certificate in Research Methods (MACRM) *Chicago, IL*
GPA: 91.6/100 (**2/27**)

- **CORE COURSES:** Advanced Mathematics(93), Linear Algebra(89), Probability and Statistics(95), Intermediate Microeconomics(96), Macroeconomics(93), Econometrics(98)
- **AWARDS & HONORS:** 15th College Mathematics Contest Third Prize, Soochow University Second Class Scholarship for Academic Excellence(2024)
- **Programming:** Python(Proficient), SQL(Comfortable), Stata(Proficient), R(Comfortable), Latex(Proficient)

RESEARCH Experieces

Political Distance and Cross-Border Subsidiary Performance

Individual Working Paper

- Merged ORBIS financials with U.S. PAC donation data and election results from 49 countries (2000–2023) to measure cross-national ideological divergence.
- Applied manifesto scores and UN voting affinity to construct ideology distance metrics between home and host countries.
- Implemented a difference-in-differences design showing that increased ideological distance after host-country elections reduces subsidiary return on assets.
- Identified moderator variables including subsidiary age, partial ownership, industry relatedness, and U.S. leadership, while highlighting risks under full control or host-country leadership.

Research Assistant | *Assoc.Prof.Yaoyao Fan* **Apr 2025 – Jun 2026**

- Constructed a firm–half-year panel dataset (2003–2022) by merging large-scale U.S. supply chain databases (customers and suppliers), cleaning raw data, and converting start–end relationship dates into half-year intervals.
- Computed key firm-level indicators (e.g., foreign vs. domestic client counts, sales shares, and supplier ratios) and developed a U.S. firm–country–half-year panel for empirical analysis of global supply chain dynamics.
- Conducted 1,000 placebo randomizations to validate the DiD design, testing political-distance shocks against customer/supplier shares and customer sales shares.

Research Assistant | *Lect.You Lu* **Nov 2024 – Oct 2025**

- Cleaned and structured datasets on firm size, profitability, liquidity, cash, B/M, ownership, analyst coverage, institutional holdings, audit quality, and property-rights type.
- Calculated the number of Confucian academies and imperial examination graduates within 100km, 200km, and 300km of enterprises to assess cultural influence.
- Computed cumulative abnormal returns(CAR)during mergers and acquisitions using one-, two-, and three-day event windows, and buy-and-hold abnormal returns(BHAR)overone-, two-, and three-year horizons.

Data and Policy Summer Scholar Program | *The University of Chicago* **Jul. 2025 – Aug. 2025**

- Performed data processing using R, constructed political polarization measures, and developed a media usage variable capturing the number of information sources (newspapers, radio, magazines, and television) individuals relied on during elections.
- Conducted regression analysis with OLS and Probit models, finding that higher media consumption is positively associated with political polarization.
- Visualized state-level polarization trends and average media outlet usage through R-based data visualization.

INTERNSHIP EXPERIENCE

KAIYUAN SECURITIES CO., LTD. **Jul. 2025 – Aug. 2025**
Intern of Investment Business Department *Shanghai*

- Analyzed asset changes, intercompany balances, loan arrangements, and fund utilization to support semi-annual reporting for two corporate bonds.
- Independently compiled a detailed breakdown of interest-bearing liabilities and finalized the work evaluation form for an entrusted management project.
- Supported four bond underwriting projects by organizing audit reports, credit rating assessments, project applications, and due diligence materials, contributing to research on credit access and market transparency.
